

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Mrs. Davenport's 'Birds of Windham and Bennington Counties, Vermont.'¹

—These two counties embrace the southern fourth of the State of Vermont, and aggregate an area of about forty miles square, varying in elevation from about 200 feet in the valley of the Connecticut River, which forms its eastern border, to nearly 4000 feet, in the interior. This region has been Mrs. Davenport's home for the greater part of her life, and she has become familiar with its flora and fauna through many years of careful exploration. The character of the country is first described, followed by an annotated list of the birds, numbering 176 species. The annotations contain much definite information about the manner of occurrence of the species. Of the twelve species of *Dendroica* recorded eight are given as more or less common breeding summer residents. Unfortunately the list is badly disfigured by typographical errors, for which the author is doubtless not responsible.—J. A. A.

Herman's The Protection of Birds in Hungary.²—Hungary — greatly to her credit — has ever taken a most active interest in bird protection, and from the first inception of the movement in Europe for the international protection of birds has been one of its strongest supporters. This work, issued in English, by order of the Hungarian Minister of Agriculture, and prepared by Otto Herman, the well-known Hungarian ornithologist and director of the Hungarian Central Bureau for Ornithology, is, in effect, an historical account of the efforts for bird protection in Europe, and of the present state of international bird protection. Preceding the historical part is an introduction (pp. 9–23) treating of the generalities of the subject, under 'Birds and Nature' and 'Birds and Man.' The 'Historical Part' begins with a general statement respecting the changes unfavorable to bird-life due to the spread of agriculture, and the resultant need for systematic bird protection through legal enactments and international coöperation. Then follows a detailed account of the progress of bird protection in Europe, beginning with a meeting of German farmers and foresters in 1868 in advocacy of an international agreement, and of subsequent steps to the same end down to the International Convention for the Protection of Birds held in Paris in 1902, and the adoption, in 1906, of the 'International Convention for the Protection of Birds,' into the "Corpus Juris" of Hungary; which, "being endowed with the force of law, found the rational protection of birds in Hungary a *fait accompli*." The signatories to the Paris Convention (March 19, 1902) include, through their properly appointed representatives, the following countries: Austria, Prussia, Belgium, Spain,
